

This fully enclosed curing chamber features 360 degree shielding for maximum UV protection. Just place your IntelliRay or SunRay on top of the oven and start curing - *no tools required!*

The Rayven includes a door interlock for use with the IntelliRay system, which automatically causes the unit's shutter to close when the door is opened. Dual rear panel D-sub connectors allow pass through of IntelliRay control signals for use with a PC, PLC, shutter control foot pedal, external interlock, etc. The oven also has an adjustable height curing tray which allows for 5 repeatable curing distances, and a door mounted lamp-ON indicator.

Specifications:

Category	Parameter	Value	Conditions/Notes
